

Project Initialization and Planning Phase

Date	13 July 2026
Team ID	
Project Name	SkillEcho — Voice-Based Concept Understanding Analyser (VBCUA)
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

The Customer Problem Statement template helps the team focus on what matters to create experiences people will love. Manual oral examination and spoken-interview assessment methods are inherently subjective, time-consuming, and lack quantifiable acoustic metrics — resulting in inconsistent grading, evaluator fatigue, and an inability to scale beyond one-to-one interactions.

Example

I am	I'm trying to	But	Because	Which makes me feel
------	---------------	-----	---------	---------------------

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A university professor conducting oral examinations (viva voce).	Grade student conceptual understanding consistently across a large cohort.	Grading drifts across sessions and lacks quantifiable acoustic metrics to fall back on.	She personally conducts ~180 oral exams per semester across three courses with no automation support.	Frustrated by evaluator fatigue and anxious about defending grades if a student appeals.
PS-2	A senior HR manager screening technical candidates for a mid-size IT services firm.	Screen 400+ candidates per quarter fairly, consistently, and efficiently.	Interviewer bias and unscalable one-to-one screening yield an inter-rater reliability of only 0.61, below the 0.75 acceptable threshold.	Each technical screening interview requires 30–60 minutes of dedicated interviewer time.	Overwhelmed by the talent-acquisition bottleneck and concerned about inconsistent, hard-to-justify hiring decisions.

Target Personas

Persona	Profile
Dr. Priya — University Professor (Age 42)	Computer Science, State University. Conducts 180 oral examinations per semester across three courses; struggles with consistency between the first student (evaluated fresh) and the last (evaluated fatigued). Needs an objective, AI-powered scoring assistant that provides a baseline evaluation she can adjust, eliminating drift.
Ravi — Senior HR Manager (Age 35)	Mid-size IT services firm (2,000 employees). Hiring pipeline requires screening 400+ candidates per quarter; the technical round has an inter-rater reliability score of only 0.61 (below the 0.75 acceptable threshold). Needs an automated first-pass evaluation of candidate verbal explanations generating standardised, comparable reports for panel review.
