Project Name	SkillEcho — Voice-Based Concept Understanding Analyser (VBCUA)
Maximum Marks	4 Marks

Empathy Map — Evaluator Persona

Understands the University Evaluator / HR Interviewer from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem of subjective, unscalable oral assessment. This helps the team build a customer-centric solution.

SAYS “I know my grading drifts by the end of the day — I just can't help it after 30 back-to-back sessions.” “I wish I had something concrete to point to when a student challenges their grade.” “The rubric says ‘demonstrates understanding,’ but that means different things to me and my colleague.”	THINKS “Am I being harder on this student because the previous one was exceptional?” “They sound confident, but are they actually saying the right things?” “There must be a better way to do this in 2026 — why are we still doing this manually?”
PERSONA: Dr. Priya Sharma (Composite Persona) Role: University Professor / Technical Interviewer — 10+ years conducting oral examinations and viva voce	
DOES - Scribbles brief manual notes during each oral session; note quality degrades with fatigue. - Unconsciously benchmarks each student against the previous one rather than an absolute standard. - Cuts sessions shorter (10 min → 5 min) as the queue grows and re-listens to recordings during disputes.	FEELS - Frustration — grading 150+ students with no automation support. - Overwhelm — exam season requiring 4+ hours of continuous oral assessment daily. - Hope — hearing about AI tools that might assist (not replace) the evaluation process.

Key Insights and Design Implications

Insight	Design Implication for SkillEcho
Evaluators are aware their grading is inconsistent but feel powerless to fix it.	Provide a deterministic, reproducible score that acts as an objective baseline.
Absence of acoustic/signal data means evaluators conflate delivery style with content quality.	Separate semantic similarity (content) from acoustic features (delivery) and report both independently.
Evaluators need an audit trail — not just a score, but a permanent, downloadable record.	Generate a PDF evaluation report with transcripts, metrics tables, and waveform charts.

Insight	Design Implication for SkillEcho
Speed matters — evaluators won't adopt a tool that adds time to their workflow.	Process evaluations in under 30 seconds (target latency for the full pipeline).
Evaluators want to remain in control — AI should assist, not replace.	Position SkillEcho as a scoring assistant; final grading authority remains with the human evaluator.
